

Transferring Images from a Slow Android Cellphone to Your computer to Improve Its Speed.

Introduction: This are the instruction to transfer images from an android device to a computer. Note: these instructions can be used to transfer other types of files, for example, videos, documents, downloads, etc. By following the instructions any person with any computer experience can complete the task.

Things needed:

An Android cellphone or tablet where the pictures are stored.

A computer with enough memory to support all the files to be transferred.

Desktop computer

Laptop

USB-to-USB type C cable or a USB to Micro USB cable.

MicroUSB

USB Type-C

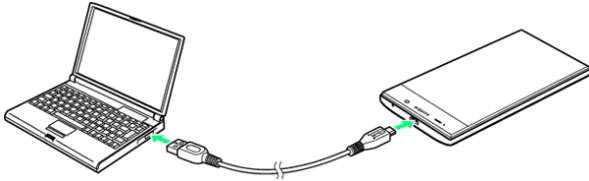

USB Type C

Micro USB

1.0 Plugging Device to Computer.

- 1.1 Turn your computer on and make sure your cellphone is on too.
- 1.2 Plug USB Type C/ Micro USB to cellphone and then plug the other end to your computer.
- 1.3 Autoplay is going to start, and it will open file explorer.

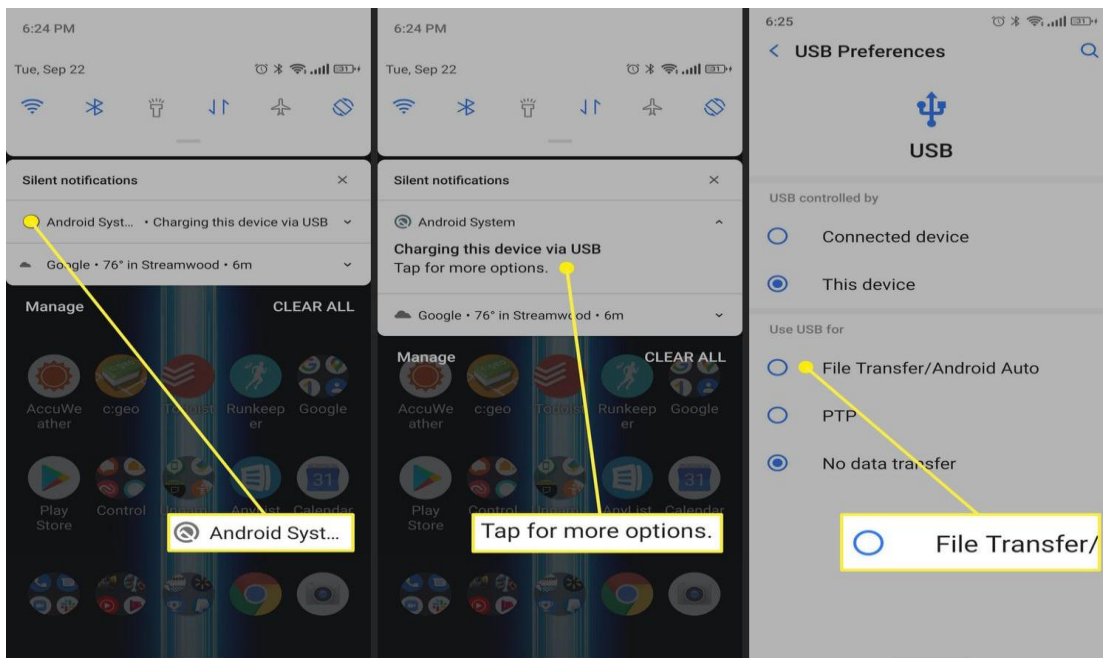

2.0 Making Sure That a Connection is Established Between Devices.

- 2.1 If your cellphone has a passcode or pin set, unlock it.

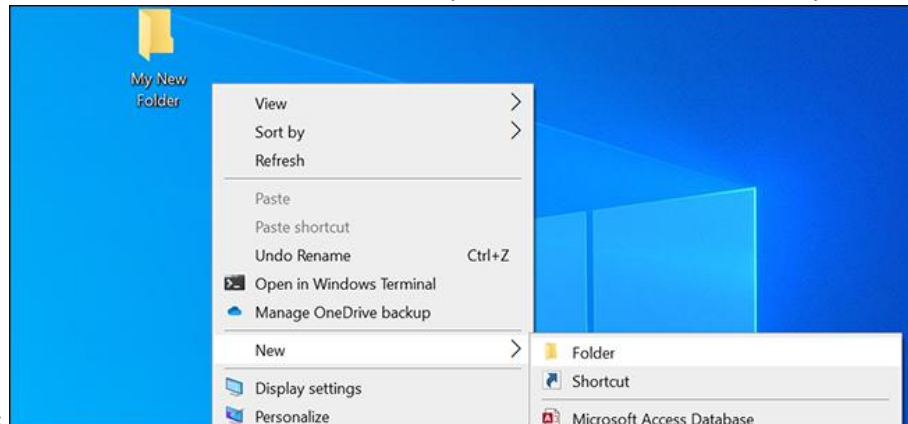

- 2.2 Swipe down from the top of your cellphone's screen and choose USB options.
- 2.3 Choose file transfer.

3.0 Create Folder Where Pictures Will Be Safe.

3.1 Now go to your computer and create a folder on your desktop by right-clicking on your desktop, choosing new, and click folder. Name the folder whatever name you want. This folder is where you are

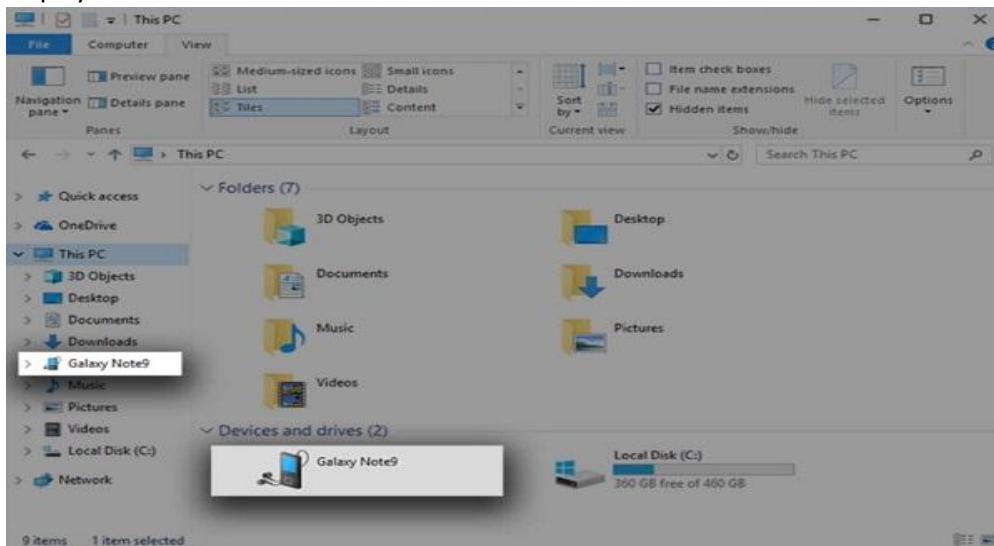

going to store your images.

4.0 Access Your Cellphone Files Through Your Computer.

4.1 Open file explorer on the bottom of your desktop.

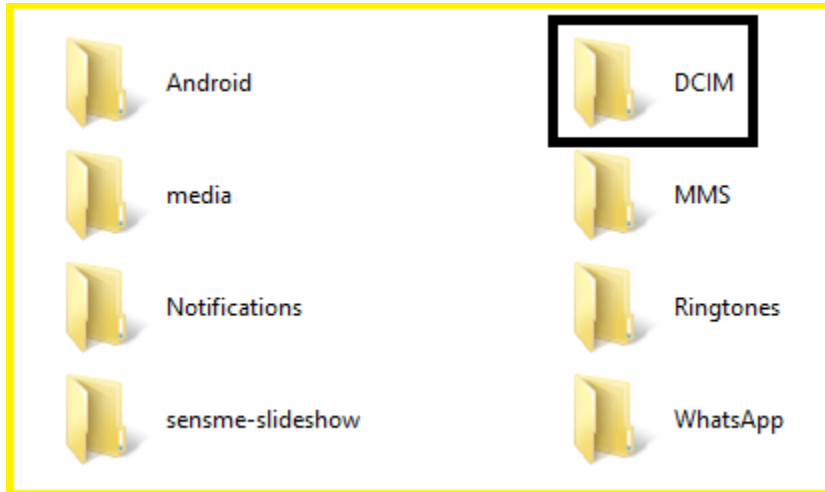

4.2 Once file explorer is opened, double click on the left under This PC where the name of your device is displayed.

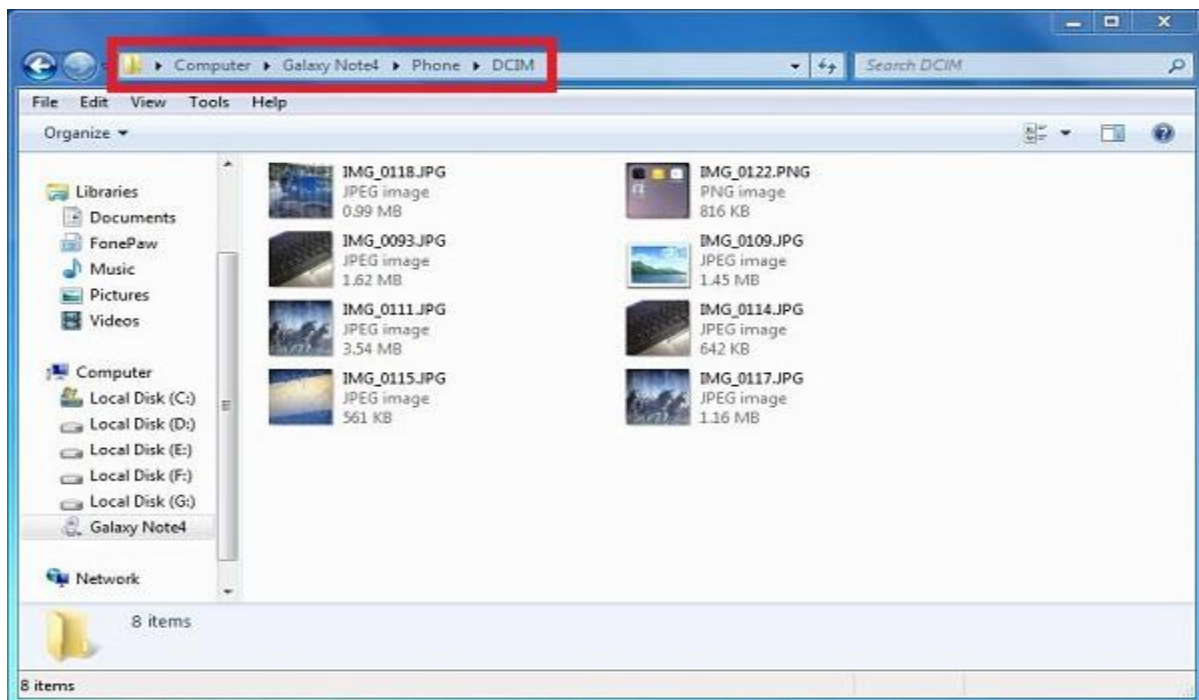

5.0 Access Your Pictures Through Your Computer.

5.1 Double click on Internal Storage.

5.2 Now you can either cut the whole DCIM folder or double click DCIM, then double click Camera, and now you can choose the images you want to transfer by right-clicking on the images you want, then clicking cut, choosing to cut will allow you to copy your files to your computer(WARNING, after choosing cut and then paste on a new location, this will permanently delete your pictures from your device, but will be saved on the place you pasted it to).

OR

Conclusion: Now that you transferred your images from your cellphone to your computer, you can unplug the cellphone from your computer. I recommend you restart your device so it can refresh the system. Once it turns back again, enter your password/pin, and now enjoy a faster device with more free storage to save files and take new pictures.
